3. Looking forward

# Gender inequities in Ugandan education have deep roots

- Historically, access to education in Uganda has heavily favoured males.
- This imbalance has had a significant impact on the educational achievement of the current adult population.

# Female adults have lower attainment rates

Although adult literacy rates have been rising steadily for all, there is still a significant gap between adult males and adult females

# Yet, significant progress advancing gender equity has been achieved over the past two decades

- Uganda has made significant progress towards achieving greater gender equity in the education system over the past two decades.
- The gross enrollment rate of girls in primary school has recently achieved full parity with, and even exceeded, that of boys.
- The gross enrollment rate of girls in secondary school has not yet achieved full parity, but it has been steadily increasing over the past five decades.

# More and more girls have enrolled in school in the past 5 decades

Gender composition of primary school students in Uganda  
By year

Note: values estimated from the gender parity index on gross enrollment for the respective year and educational level, according to the World Bank Development Indicators

Gender composition of secondary school students in Uganda

# Yet, significant progress advancing gender equity has been achieved over the past two decades

- Girls are also completing primary school at higher rates than boys.
- The primary completion rate for males has decreased significantly over the past two decades, while for girls, it has decreased only marginally.
- The decline in primary completion rates for males may be due to a combination of factors, including a decline in educational quality and an increase in the number of primary school pupils.
- The progress made in increasing female participation in primary education is encouraging, but it is important to ensure that learning outcomes for girls have also been at pace with those of their male counterparts.

Yet, significant progress advancing gender equity has been achieved over the past two decades

- Girls are also completing primary school at higher rates than boys.

The primary completion rate for males has decreased significantly over the past two decades, while for girls, it has decreased only marginally.

1. National trends in gender gaps in Uganda over the past decades
2. Differences in learning outcomes by gender in the Uwezo data
3. Looking forward

# Consistently, girls' learning outcomes are equal or even outperform those of their male counterparts

Notes: following the methodology outlined in the Uwezo 2021 report, averages use weights at the sub-region level

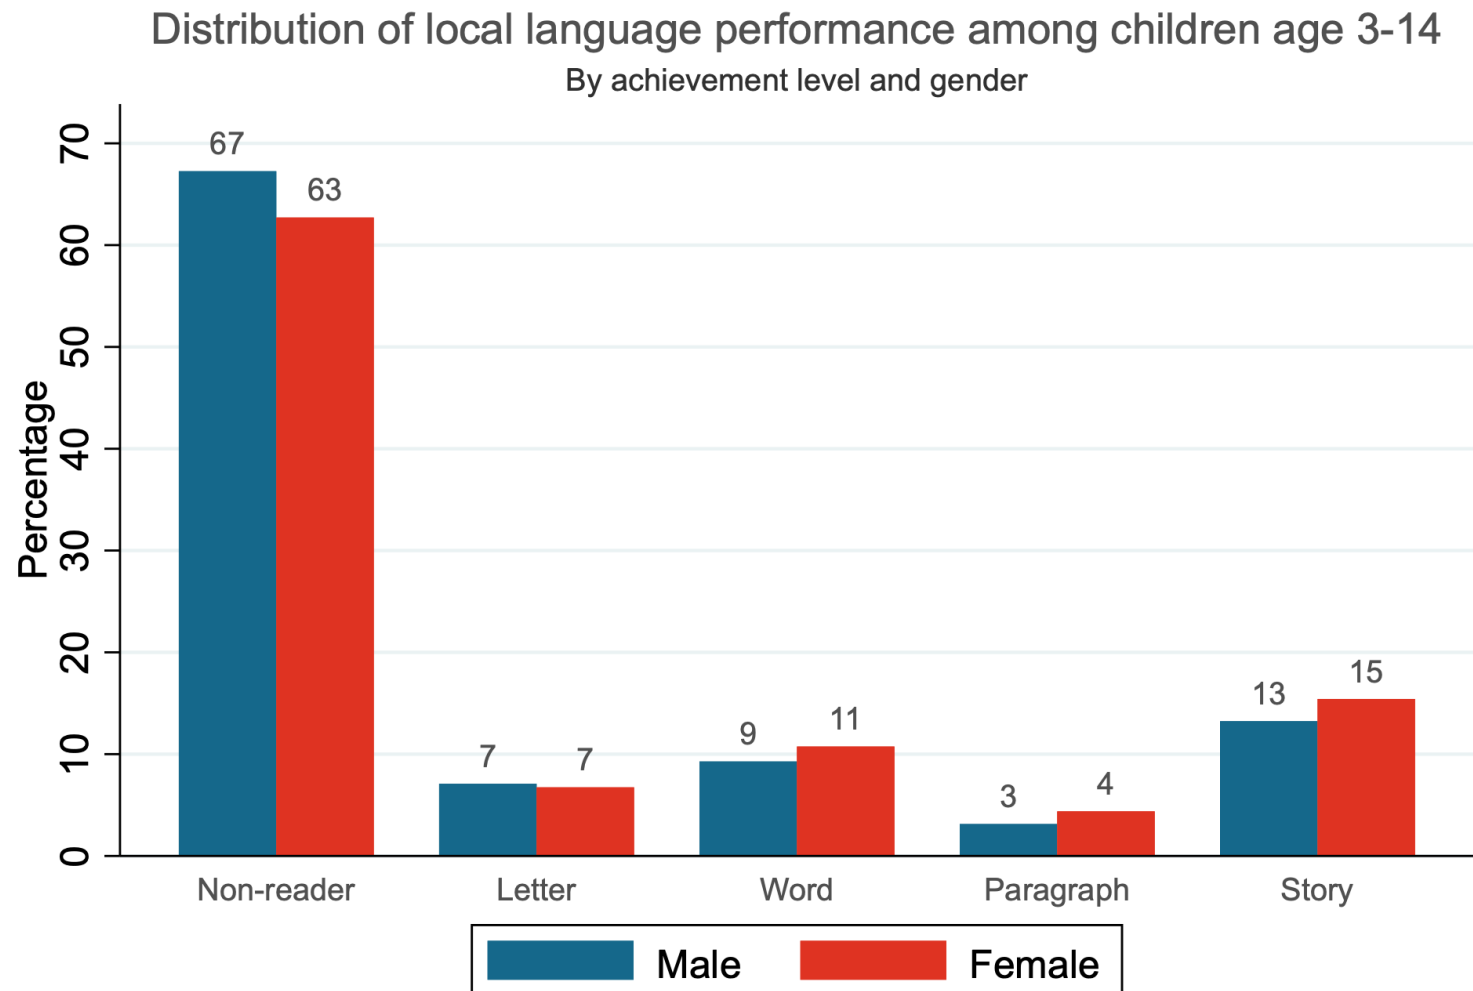

The largest differences between girls and boys are on both ends of the spectrum: more boys who do not reach the most basic skill, and more girls reaching the highest skill

Notes: following the methodology outlined in the Uwezo 2021 report, averages use weights at the sub-region level

The largest differences between girls and boys are on both ends of the spectrum: more boys who do not reach the most basic skill, and more girls reaching the highest skill

Notes: following the methodology outlined in the Uwezo 2021 report, averages use weights at the district level

The largest differences between girls and boys are on both ends of the spectrum: more boys who do not reach the most basic skill, and more girls reaching the highest skill

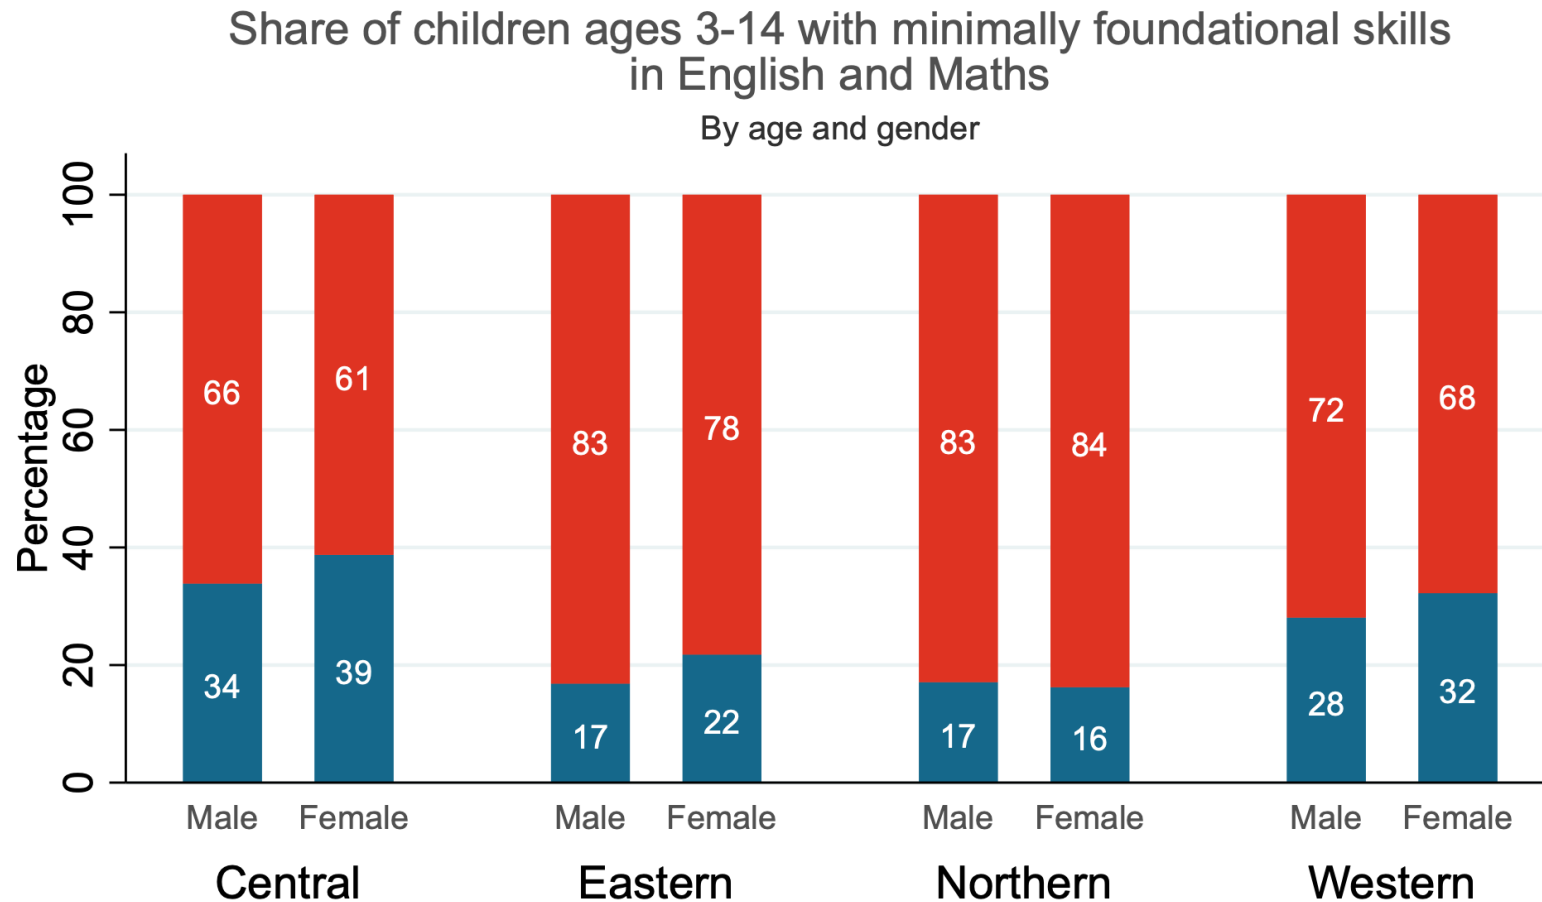

Notes: following the methodology outlined in the Uwezo 2021 report, averages use weights at the sub-region level

# The Northern region is lagging behind in terms of gender equity on learning outcomes

Notes: following the methodology outlined in the Uwezo 2021 report, averages use weights at the sub-region level

# Beyond learning, girls in Uganda still face challenges not shared by their male peers

- Uwezo data reveals that **girls in Uganda do as well as boys in terms of learning outcomes.**
- This is a **significant achievement**, given the barriers to education that previous generations of women in Uganda faced.
- However, **girls still face many challenges in school, including school-related gender-based violence, child marriage, and adolescent pregnancy.**
- The gains made in girls' education in Uganda **should not be taken as the end of the journey**, but rather as an encouraging starting point to keep working towards greater gender equality.

# Learning outcomes are low for both boys and girls, and there is a need to develop policy that turns the situation around

- Even though girls in Uganda have higher learning outcomes than boys on average, their **learning outcomes are still weak.**
- One in three 10-year-old Ugandan girls is a non-reader in English, and over two in five cannot perform basic addition.
- This indicates that a **substantial proportion of pupils have been in the public education system for many years but still struggle to solve basic exercises by the time they reach upper primary.**
- This is a concerning situation that highlights a **significant misalignment between pupils' competencies and the expected levels for their respective grades.**

# Improving pedagogy for all might be the key to elevate learning outcomes for girls

- A review of evidence found that general **interventions that improve the quality of education, such as providing better teacher training and resources, can have a positive impact on girls' [and boys'] learning outcomes.**
- Interventions that lower the cost of education, such as the elimination of school fees, can make it easier for girls to attend school and stay in school.
- The review concluded that there might not be a need for governments to implement separate programs specifically for girls, as **effective general interventions can also improve girls' learning outcomes.**

# *Thank you!*
